Tool: Electronic visit verification mandates map

Use this tool to determine whether your state has selected an electronic visit verification (EVV) model, and if so, which one. This map was developed by the Partnership for Medicaid Home-Based Care with designations reflecting the best of the partnership’s knowledge. The map reflects the direction of states relative to agency provided care. In a closed model, states identify one EVV system or vendor and require agencies use that system. An open model gives agencies more choice.
